

Sarthak Kadam

Full Stack Developer

☎ +91 7718061474 | ✉ sarthakkadam147@gmail.com | 🐙 [Github](#) | 🔗 [LinkedIn](#) | ✖ [Twitter](#)

Education

Bachelor of Science, Information Technology, K.M. Agrawal College, University of Mumbai 2023 - 2026

Technical Skills

Programming Languages: TypeScript, JavaScript, Python, SQL, C++

Frameworks and Technologies: React, Next.js, Vite, Node.js, Express.js, Hono, Tailwind CSS

Databases and Backend: Google Gemini API, REST APIs, Supabase (PostgreSQL), MongoDB, Prisma ORM, Drizzle ORM

Others: Git, GitHub, Docker, Vercel, Cloudflare, AWS, Linux

Open Source Contributions

VoltAgent | Typescript, AI SDKs, Open Source | [Github](#) May 2025 – Jun 2025

- Contributed to the VoltAgent open-source AI framework by implementing the Anthropic Provider using the Anthropic AI SDK, enabling seamless integration with the framework's provider ecosystem.
- Added multimodal support for the Anthropic provider, extending compatibility with image and text-based AI workflows.
- Resolved a core issue by improving JSON Schema to Zod schema parsing, enhancing schema validation reliability and developer experience.
- Successfully merged multiple pull requests after code review, collaborating with maintainers on production-quality TypeScript code.

Projects

DraftMyMail AI | AI-Powered Professional HTML Email Generator Sept 2025 – Present

React, Vite, Typescript, Hono, Google Gemini API, Cloudflare Workers & Pages, Supabase

Live: draftmymail.com

Frontend GitHub: [Venomhare/draftmymail-frontend](#) **Backend GitHub:** [Venomhare/draftmymail-backend](#)

- Developed DraftMyMail AI, an AI-powered SaaS platform that generates professional, responsive HTML emails from natural language prompts, enabling businesses and individuals to create production-ready email templates in minutes.
- Engineered AI-powered email generation and conversational editing workflows using the Google Gemini API, allowing users to iteratively refine email content while maintaining responsive HTML structure and consistent styling.
- Implemented Gmail draft integration, customizable color palettes, subscription-based feature gating, secure authentication, and deployed the application using Cloudflare Pages and Cloudflare Workers for a globally distributed, low-latency experience.

Powerpay Wallet | Full-Stack Digital Wallet Platform May 2025 – Aug 2025

Next.js, Typescript, Node.js, Express.js, PostgreSQL, Prisma ORM

Live: powerpay.vercel.app **GitHub:** [Venomhare/powerpaywallet](#)

- Developed PowerPay Wallet, a full-stack digital wallet platform enabling secure user authentication, account management, and peer-to-peer money transfers with real-time balance updates.
- Architected RESTful backend services using Node.js, Express.js, and PostgreSQL, implementing JWT-based authentication, transaction validation, and persistent account management.
- Built a responsive frontend with Next.js, TypeScript, and Tailwind CSS, providing an intuitive dashboard for user onboarding, transaction history, and wallet operations.
- Designed secure fund transfer workflows with input validation, protected API routes, and optimized database queries to ensure data consistency and reliable transaction processing.

LGI Modz Showcase | Full-Stack Online Game Mod Store Dec 2024 – Present

Next.js, Typescript, Node.js, PostgreSQL, Drizzle ORM, Paypal

Live: lgimodz.store

- Developed a responsive product showcase site with customer support chat, image uploads, automated emails, and PayPal checkout integration.
- Successfully processed and managed 100+ customer payments through integrated PayPal checkout.
- Built reusable, responsive UI components with optimized image handling and server-side APIs to deliver a fast and scalable shopping experience
- Implemented secure user authentication, order management, and database-driven product and customer data using PostgreSQL and Drizzle ORM.
